

CASE REPORT

I am **Dashrath Singh**, a retired principal of Gangapur Inter College, Gangapur, Varanasi. I now stay in my village called Kundaria. Post Office: Benipur, District: Varanasi, Uttar Pradesh. I retired from my Principal's job in June 2008.

In November, 2009 I suddenly started having chest pain. I went to Dr. P R Sinha and took his treatment. When the pain reappeared I was admitted in Apex Hospital. My Angiography was done on 26 th November, 2015 by Dr. Asish Agarwal and he advised me to undergo Bypass Surgery. There were two blocks of 95% and 100% in my LCX and RCA. My LVEF or pumping power of heart was 45%. I did not go for the Bypass Surgery and was looking for an alternative treatment.

Then one of my ex colleagues, who is under treatment of Dr. Bimal Chhajer informed me about Saaol's treatment process. So, I went to Delhi in February, 2016 and consulted Dr.

Chhajer. He advised me medicines and lifestyle. He also suggested that I go to Lucknow to undergo Natural Bypass(ECP) and Biochemical Angioplasty(BCA) – as Lucknow was nearer to my home. In March 2016, I thus went to Lucknow and stayed there for 40 days and completed the treatment.

On 23 February, 2017 I again went for an Angiography, Lipid Profile and LFT. The reports showed a tremendous improvement which I would like to share with you. Both my blocks were reduced by 20-30%. I do not have any difficulty now and am a happy person. The quantity of my medicines have also reduced. My pumping power has also increased from 45% to 52%.

My heart treatment was done without any surgery by Saaol Heart Center and for this I will remain indebted to Dr. Bimal Chhajer all my life.

Angiography	Before Treatment	After Treatment
Date	26-11-2015	23-02-2017
ECHO	LVEF = 45%	LVEF = 52%
LAD	Normal	Normal
LCX	95% (P)	20 - 30% (P)
RCA	100% (M)	20 - 30% (M)
