

CASE REPORT

My name is **Manju Agarwal**. My age is 46 and I am from Rourkela, Odisha. I want to share my experience of my treatment in Saaol heart Center.

In January, 2016. I was getting pain in the chest, Ghabrahat on climbing stairs. On check up my TMT was found to be positive. I thus went to Bhubneshwar and showed in Aditya Care Hospital where my Angiography was done. According to the report I had 90% blockage in LAD and 70-80% in Proximal RCA and 100% blockage in mid RCA. The cardiologists advised for Bypass Surgery (CABG). But I was not interested. So, I was looking for alternatives.

Then I came to know about Dr. Bimal Chhajer and Saaol Heart Center. We immediately met him and he advised us lifestyle changes, medicines, Natural Bypass (ECP)

and BCA. Since I had my parents home in Ranchi – I shifted to Ranchi and under took 35 sittings of ECP and 20 sittings of BCA. I also started Zero oil cooking, started practise of Yoga and walking.

I was feeling better and better. I completed my treatment in August, 2016. My chest pain and ghabrahat disappeared. On 5th January, 2017, I went to Kolkata and performed another Angiography in AMRI Hospital Mukundapur. I preferred to take up CT angiography 128 slice. My blockages showed tremendous improvement. My LAD now have only 35% blockage and RCA has 15% blockage. I also lost 12 Kg weight during my treatment till now.

I want to thank Dr. Bimal Chhajer, Dr. Sanjay of Saaol Ranchi center and their staff for my successful treatment.

Angiography	Before Treatment	After Treatment
Date	29/01/2016	05/01/2017
LMCA	Normal	Normal
LAD	90%	35%
LCX	Normal	Normal
RCA	70-80% (P), 100% M	15%
