

## Patient's Comment

My name is Anila Jalan and I am 65 years old. Though I have diabetes and hypertension, my life was going very smooth without any health issues till I got ECG done as a routing check up advised by my diabetologists. ECG was not normal so coronary CT Heart scan was done. The report was bad 80-95% blockages in each artery. We visited all the best cardiologist in Chennai with same advice of BY PASS SURGERY. I was not ready for the surgery. I have heard about Dr. Chhajer through distant relative. We immediately flew to Kolkata to meet him. Though it was a tough decision but I was quite firm in taking my own stand of going with Saaol treatment with full faith in Dr.Chhajer. I religiously followed his each and every advice BCA,

ECP, walking weight reduction and most important Zero oil food. Before going for my second scan I felt and knew the report will be better as I was feeling much light, energetic and could walk fast and more distance without feeling fatigue. My scan reports showed as Dr. promised, 20-30% reduction in my blockages were visible. I am a very active and outgoing person. My course of treatment is over still I follow his instructions especially zero oil food and enjoy life. I thank Dr.Chhajer heartily as he has taken so good care of my heart. From the bottom of my heart I advise each and every person suffering form heart disease that at least try Saaol treatment once before going for any surgery.
